

# Our Energy Management System Policy

*Establishing and Operating an Energy Management System for the development and production activities of functional engineering plastics encompasses the relevant business processes under our energy management scope.*

- Our Energy Management System ensures that our activities within its scope are carried out in compliance with the ISO 50001:2018 standard.
- We aim to establish and maintain a system that is compliant with the ISO 50001:2018 Energy Management System standard.
- We identify legal requirements, obligations defined in contracts, and technical requirements to establish an appropriate energy management system.
- Ensuring compliance of procurement processes with necessary procedures focused on energy efficiency.
- Integrating the Energy Management System with a continuous improvement strategy into all corporate management systems and ensuring ongoing review activities.
- Planning, implementing, and annually reviewing energy efficiency activities with aim and action plans to reduce environmental impacts, and conducting research for renewable energy sources.
- Committing to establish an energy management team and develop training programs.

IMS Polymers management and employees commit to making every effort to achieve the above-mentioned goals and objectives.
